**Java**

```java
class Solution {
    public List<List<Integer>> findMissingRanges(int[] nums, int lower, int upper) {

    }
}
```

---

**JavaScript**

```javascript
/**
 * @param {number[]} nums
 * @param {number} lower
 * @param {number} upper
 * @return {number[][]}
 */
var findMissingRanges = function(nums, lower, upper) {

};
```

---

**C++**

```cpp
class Solution {
public:
    vector<vector<int>> findMissingRanges(vector<int>& nums, int lower, int upper) {

    }
};
```

---

**C#**

```
public class Solution {
    public IList<IList<int>> FindMissingRanges(int[] nums, int lower, int upper) {

    }
}
```

---
